Election/Restriction

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Species 1: Monoclonal antibody 2D6. Claims 2 and 4.

Species 2: Monoclonal antibody 4B6. Claims 2 and 5.

Species 3: Monoclonal antibody 5C6. Claims 2 and 6.

Species 4: Monoclonal antibody 6D7. Claims 2 and 7.

Species 5: Any ONE sequence disclosed in Figure 1. Claim 3.

2. Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

3. The following claim(s) are generic: 1 and 8.

4. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: a monoclonal antibody that binds to GW 182 protein is obvious over Eystathioy et al (Molecular Biology of the Cell. Vol. 13, 1338-1351. 1992) in view of Campbell (Immunoassay. Edited by Diamandis et al. 1996).

Eystathioy fully discloses GW ribonucleoprotein including a 182kDa protein designated GW182 and rabbit and human serum binding to the same.

Eystathioy differs in failing to specifically teach monoclonal antibodies to GW 182.

Campbell, however, discloses that a monoclonal antibody, properly selected, is the preferred reagent since it is standard and eternal. It is specific if selected to be so. It has high affinity, is easily reproducible and may be produced as much as is required for as long as it is required.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use the fully characterized antigen taught by Eystathioy to produce a monoclonal antibody such as taught by Campbell for the advantages therein.

5. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be

traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Sequence Compliance

6. This application contains sequence disclosures that are encompassed by the definitions for nucleotide and/or amino acid sequences set forth in 37 CFR § 1.821(a)(1) and (a)(2). However, this application fails to comply with the requirements of 37 CFR §§ 1.821 through 1.825 for the reason(s) set forth on the attached Notice To Comply With Requirements For Patent Applications Containing Nucleotide Sequence And/Or Amino Acid Sequence Disclosures.

7. APPLICANT IS GIVEN A **ONE MONTH** (running concurrently with the Election/Restriction requirement) **EXTENDABLE PERIOD WITHIN WHICH TO COMPLY WITH THE SEQUENCE RULES**, 37 CFR §§ 1.821 - 1.825. Failure to comply with these requirements will result in **ABANDONMENT** of the application under 37 CFR §1.821(g). Extensions of time may be obtained by filing a petition accompanied by the extension fee under the provisions of 37 CFR § 1.136. In no case may an applicant extend the period for response beyond the six month statutory period. Applicant is requested to return a copy of the attached Notice to Comply with the response.
